EXPERIENCE

Associate Software Engineer - Visa | Denver, CO

July 2025 - Present

- Enabling scalable distributed joint account management, supporting multi-account data consistency across shards, by designing and implementing a migration system orchestrating multiple REST APIs, SQL Server stored procedures, and cross-database cluster replication pipelines.
- Improved data retrieval performance for high-throughput payment processing APIs serving major issuer clients including Chime, by developing and maintaining the Issuer Processing Cache Manager, core Issuer Processing Services, and event-driven microservices.
- Accelerated issuer onboarding and operational workflows by building features for a client-facing issuer hub platform using C# ASP.NET Core and Spring Boot.
- Maintained high availability of non-production SQL Server environments across sprint cycles by serving as Dev SRE and providing on-demand reliability support to engineering teams.
- Improved architectural consistency and code quality across distributed service ownership by championing cross-functional code reviews with engineering, SQL, and platform teams.

AI Studio Fellow - Resolvly | Los Angeles, CA

August 2024 - Dec 2024

- Prepared datasets for an AI-powered college recommendation model, improving model input reliability, by conducting exploratory analysis, preprocessing, and feature engineering on 32 CSV files using pandas, scikit-learn, and matplotlib.
- Established the core modeling foundation for the recommendation system by developing initial k-means clustering and supervised learning components within the model framework.

Student Independent Research Intern - NASA JPL | Pasadena, CA

February 2023 – May 2023

- Reduced ECCO dataset user guide creation time by ~60% (100 hrs to 40 hrs) by building a reusable LaTeX template and CLI workflow for automated dataset visualization and table generation.
- Streamlined processing of all 90 ECCO sea-ice datasets down to a single CLI command by authoring Python scripts leveraging numpy, xarray, and matplotlib.

PROJECTS

PixelPlates | Next.js, TypeScript, AWS, Supabase Postgres

June 2024

- Led development of Next.js application coupled with Express.js, including RESTful routes for user authentication, review management, and photo handling, which access Postgres database with Drizzle ORM.
- Designed a CDN and serverless lambda function to handle photo resizing and delivery with AWS to cache photos and improve accessibility of modifying photo size and quality. (<https://github.com/INF124-Group25/pixel-plates>)

VSCode Unit Test Generator | React, LangChain, TypeScript

November 2023 – April 2024

- Improved test coverage and reduced testing overhead to a single React interface by building a VSCode extension that automates unit test generation using LangChain. (<https://github.com/spideruci/live-testing>)

SKILLS & LANGUAGES

Languages: C#, Java, Python, TypeScript, JavaScript, SQL, C++

Backend / APIs: ASP.NET Core, Spring Boot, EF Core, Node.js, Express.js, REST APIs, React, Next.js

Databases: SQL Server, PostgreSQL, MongoDB, Supabase

Tools: Git, xarray, numpy, Pandas, scikit-learn, Jupyter Notebook, matplotlib

EDUCATION

University of California Irvine | *Software Engineering B.S.*

June 2025

University of California Berkeley | *Sociology B.S.*

June 2022
