EDUCATION

University of California Irvine | *Software Engineering B.S.* GPA: 3.64 | Graduated June 2025
Relevant Coursework: Algorithms, Data Structures, Database Management, Object-Oriented Programming & Design, Computer Networks, Computer Architecture, Intro to SWE, Operation Systems, Information Retrieval

EXPERIENCE

AI Studio Fellow - Resolvely | Los Angeles, CA August 2024 - Dec 2024

- Prototyped a college recommendation system by coding **Python components** for data analysis and modeling, collaborating with advisors to meet business objectives.

Student Independent Research Intern - NASA JPL | Pasadena, CA February 2023 – May 2023

- Alleviated manual documentation creation effort by **60%** for processing **90+** scientific datasets by programming a **Python CLI tool** using numpy, xarray, and matplotlib.

RESEARCH

Software Developer - Language and Learning Analytics Lab January 2025 – Current

- Empower researcher/participant collaboration for a projected **10k user base** by building a **Django/Next.js dashboard** integrating task-specific **AI chat rooms**.
- Architect robust data and role management with the backend API and **PostgreSQL schema** using Django and managing user roles (**Clerk**), configurations, and settings.
- Reduce redundant backend requests by **~60%** and improved **UI responsiveness** by utilizing **React Query** for client-side data fetching and caching.

Lead Web Developer - Hayes Lab November 2024 – March 2025

- Enabled public web access to computational models by deploying a **React/Express** application with **Supabase authentication** and **SQLite** job tracking onto a university VM.
- Introduced **maintainability/scalability** by implementing a configurable backend architecture (**modular monolith**) and utilizing **React Hooks/Context** for frontend state management.

Research Assistant Developer - Spider Lab at UCI November 2023 – April 2024

- Expanded unit test **code coverage** and reduced testing steps by developing a **VS Code extension (React.js, LangChain)** to **automate test case generation** within a centralized interface.
- Improved user experience and reduced cognitive biases by prototyping UI components based on **Figma wireframes**.

PROJECTS

ICSSC ZotSpots & Calendar API | TypeScript, AWS (Lambda, RDS), Leaflet, PostgreSQL November 2023 - Current

- Facilitate student discovery of study locations by constructing ZotSpots, a progressive **React TypeScript** web app integrating the **Anteater API** and **Leaflet** maps.
- Optimize database load by **20%** and improved event access for **12+** organizations by automating a calendar fetching pipeline using **AWS Lambda, RDS**, and machine caching.

PixelPlates | Next.js, TypeScript, AWS(S3, CloudFront), Supabase, PostgreSQL March - June 2024

- Lead development of a **Next.js/Express** full-stack photo review application featuring **RESTful routes** and a **PostgreSQL/Drizzle** backend.
- Fine-tuned photo delivery performance and accessibility by designing an **AWS CDN (CloudFront) and Lambda function** for automated image resizing, caching, and delivery.

SKILLS & LANGUAGES

Languages: Python, JavaScript/TypeScript, Java, C++, SQL, HTML/CSS

Frameworks & Tools: React.js, Express.js, Next.js, Django, PostgreSQL, AWS, Docker, Git, LangChain, Supabase

Leadership: VP of Data Science Club, CodePath: Tech Fellow (Web Development), BreakThroughTech: AI Fellow
